

# Install Instructions

Model: HF-MR083, HF-MR087, HF-MR090

**Step A** - Place the clamp (2) into the body (3) then pinch the ball of the mirror (1) between the body and the clamp. Place a washer (4) on the short screw (5) and screw it into the body (3) until the mirror is snug yet adjustable.

**Step B** - Place a washer (4) onto the long screw(6) and insert into the bottom hole on the body (3).

**Step C** - Place the nut (8) into its holder (9).

**Step D** - Place the expander (10) around the long screw from step B then place the nut (8) and holder (9) onto the long screw. Use your finger to hold the nut (8,9) onto the long screw (6) and secure them together with a 5mm hex key. Make sure that the the nut (8,9) is loose enough to allow the expander (10) to rotate.

**Step E** - With the expander (10) loose yet secure, insert the bolt end (8,9) into the end of your bike's handlebar. Adjust the angle of the body and mirror to your preferred position and tighten the long screw (6) until the expander(10) has firmly gripped your handlebar. Make sure that the mirror does not obstruct your range of motion and don't forget to wear a helmet!
